

# AUTOMAI ROBOTIC AUTOMATION FOR CITRIX EUC

automai  
Robotic Automation Platform

Automai's bots have you covered at every step of the Citrix journey.

## Performance Testing

- Right Size both on-prem hardware and Public Cloud Instances
- Measure Impact of new App deployments or upgrades
- Create performance Baselines, Compare data-driven results
- Validate Citrix Auto-Scale policies
- Test multiple logon scenarios
- Mix workflows in same test plan
- Queue bots to perform a synchronous end user task with Rendezvous points.
- Mix baseline User Stories (Common M365 Suite & Browsing) along with Custom to create simplified building blocks for automated testing

## Migrate - Build - Validate

- Validate Functionality & Performance when changing hosting platforms
- Single test plan to compare user experience on-prem and Citrix DaaS
- Validate Performance across various public Cloud based Instance types
- Simulate real user workflows for Win 10/11
- Single & multi-session right-sizing
- Create modular Scenarios to test across different lines of business platforms
- Public cloud Instance recommendation & Cost Estimates

## Post Deployment Testing

Validate EUC User Personas (Sales, Legal, Engineering) across each application or configuration change

Automated UAT post Image updates with visual validation & preconfigured test plans

Measure user response time post change - compare test results

Document changes with detailed test notes

## Continuous User Experience Monitoring

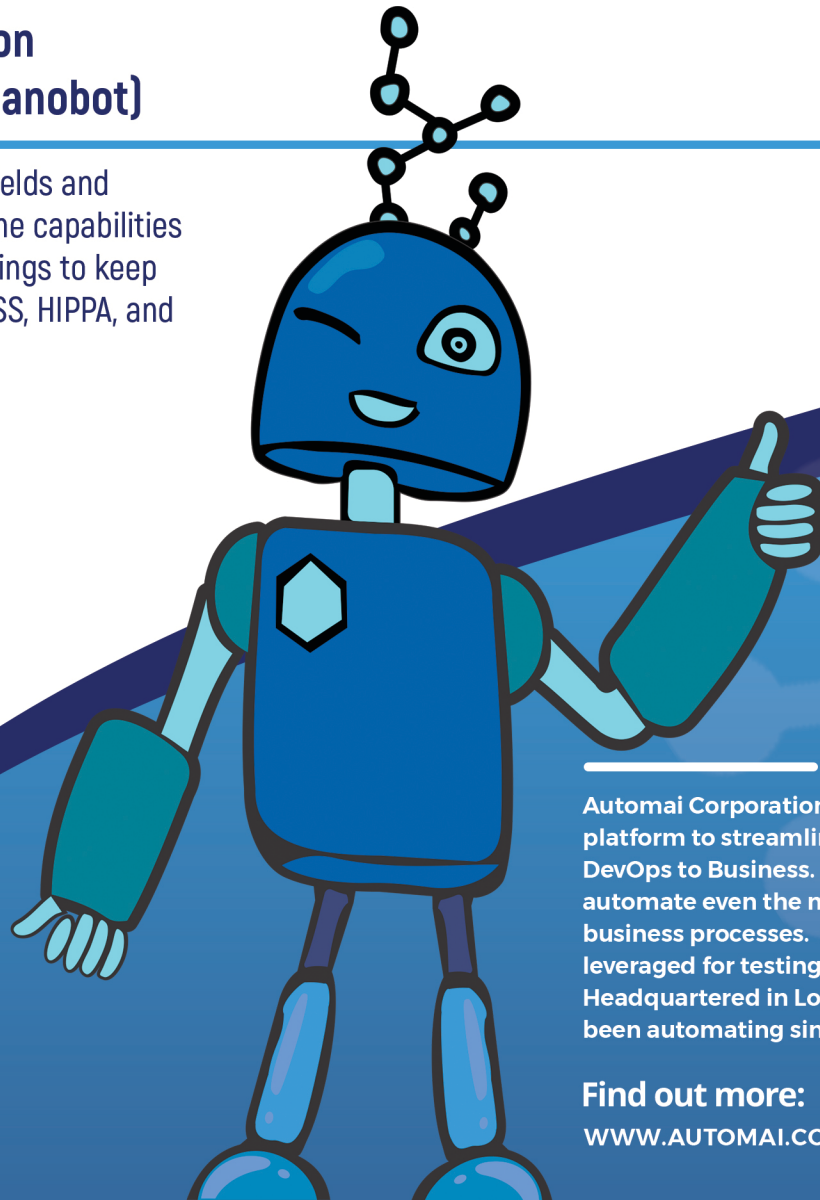

- Baseline user experience and continuously measure against it
- Simulate user sessions from any point of presence and continuously measure performance
- Test against each hosted virtual app server in a pool/delivery group
- Informative alerts (Screenshot & performance timeline of scenario)
- Performance, Functional, and Continuous testing with Double-hop scenarios
- SLA Reporting - Beyond Desktop launches...
- Business workflows monitoring: transaction times for SLA test for uptime & user experience expectations
- Create SLA Categories/Dashboards to continuously track SLA per Business Unit

## Direct Citrix Integrations (Citrix Ready)

- 1 Native StoreFront & Workspace Launch
- 2 Citrix DaaS Rest API for personalized testing and monitoring experience
- 3 Hybrid Robotic Testing support - enabling testing from both in and outside of the VDA enabling the highest efficiency rate for automated testing

## Intelligent Session Recording (ISR Nanobot)

Detect sensitive data fields and automate pause/resume capabilities during sessions recordings to keep compliance with PCI-DSS, HIPPA, and GDPR.

Automai Corporation offers the only platform to streamline automation from DevOps to Business. Intelligent bots automate even the most complicated business processes. Code-Free scripts are leveraged for testing, monitoring and RPA. Headquartered in Los Angeles, Automai has been automating since 2000.
